Channel Maintenance Dredging

Big Sandy River, Miles 0.0 to 9.0

Notice is given that on or about 28 May 2019, channel maintenance dredging will commence in the
commercially navigable portion of the Big Sandy River. Amherst Madison, contractor for the U.S. Army
Corps of Engineers, will dredge along various locations of the river. Dredging will begin in the vicinity of the
mouth and proceed to other upstream locations ending at Mile 9.0. Disposal operations will take place at an
approved site located on the Ohio River, near the right descending bank, between miles 321.0 and 322.0.

The nearest known municipal water intakes in the work area are the Kenova municipal intake at Big Sandy
River, mile 5.6, and the City of Ashland municipal intake on the Ohio River, mile 319.7.

The contractor’s floating plant will consist of the M/V LUCEDALE, M/V KEITH BLOUNT, two barge
mounted cranes, and six material barges. The M/V LUCEDALE will be in the vicinity of the dredge site and
should be contacted for passing arrangements on marine channel 13. The M/V KEITH BLOUNT will be used
to transport the material barges between the dredge site and the disposal area and will be monitoring marine
channel 13. Dredging will be performed Monday through Saturday, between the hours of 6:00 a.m. and 12:00
a.m., midnight, and is anticipated to be completed on or about 6 July 2019.

All floating plants will be moored at the worksite during non-working hours and will be lighted according to
regulations. Mariners are urged to transit at their slowest safe speed to minimize wake and proceed with
caution after passing arrangements have been made.
